For beautiful skin... from the inside out.

Healthy and beautiful skin starts below the surface in tissue that contains collagen. Collagen, a basic building block of the skin, is responsible for the skin's strength and durability plus its smooth, healthy and youthful appearance. When collagen is damaged by the sun, environmental factors or simply depleted over time, the skin appears thinner and becomes less elastic, resulting in facial lines, wrinkles, texture changes and visible signs of aging. The CoolTouch® CoolBreeze™ laser treatment is a perfect solution for stimulating and rebuilding your own collagen, for a more beautiful you.

How does a CoolBreeze laser treatment work?
The laser’s light energy passes through the epidermis and targets the dermis where collagen is formed. The laser’s heat gently stimulates the tissue, which triggers a repair mechanism, and your body begins to rebuild and replenish your own natural collagen without injury to the skin's surface. Results are achieved from the inside out! As new collagen is produced, your skin begins to look softer and younger.

What does a treatment feel like?
CoolBreeze treatments are quick and easy, and typically take less than an hour. Patients typically feel a warm sensation and see a blush or redness in the treated area for an hour or so following the treatment. Best of all, with no downtime after treatment, you can apply make-up and resume your regular activities immediately.

What improvement will I see?
Patients have a high degree of satisfaction with their results. Many report an improvement in both skin tone and texture and describe how fine and deeper lines become less visible and begin to disappear. Improvement is achieved with a series of treatments resulting in collagen enhancement. The average number of treatments is 3 to 5 performed over a period of 2 to 4 months. During your consultation, you will be advised as to the number of treatments recommended to achieve your desired results. Occasional touch-up treatments may be suggested to maintain or continue your improvements.

“Patients find that after CoolBreeze laser treatment, their skin is noticeably smoother with decreased pore size and improved tone and texture.”
—David Vasily, MD
Aesthetics Cosmetic & Laser Center
Bethlehem, PA

“The CoolBreeze treatment wasn't painful at all. It actually felt healing, my wrinkles seem diminished and my skin feels so much smoother, firmer and healthier...”
—Kate, a CoolTouch laser treatment patient
