**COOLTOUCH®**

# Fast acting and long lasting.

There's a clear distinction between CoolTouch® and lengthy acne treatment options. This fast laser light procedure effectively targets and shrinks oil glands — the source of continued breakouts that can lead to self-conscious scars.

Cleared by the U.S. Food and Drug Administration, CoolTouch treatments are long-lasting and safe for all skin types, including tanned and dark-skinned patients.

## How does CoolTouch work?

Unlike other therapies that address bacterial symptoms only, CoolTouch targets the source of acne. Your doctor applies CoolTouch laser energy in gentle pulses over the treatment area. The energy penetrates deep enough to shrink oil glands and decrease their capacity to produce acne without affecting the oils necessary for healthy skin. Your body also rebuilds and replenishes your own natural collagen to fill in acne scars.

## What is treatment like?

Convenient CoolTouch treatments can be performed on any area of the skin. It's common to feel a slight tingling sensation during treatment. A cooling mist keeps your skin cool and comfortable throughout.

## How long does a treatment take?

Treatments take 10-30 minutes, depending on the area to be treated and the severity of the condition.

## How will you look after treatment?

You may experience mild redness in the treated area for a short period of time following the procedure. There's no downtime, so you can resume regular activities immediately after the treatment — and even apply makeup.

## What improvement will you see?

You will notice significant reduction of acne and improved appearance of acne scars. Results are achieved through a series of treatments, and follow-up visits may be required to prolong your improvements.

## How many treatments will you need?

Typically, it takes more than one treatment to achieve the optimum level of improvement. On average, patients receive 3-6 treatments at monthly intervals.

*“Our acne patients are delighted with the improvements they see with as few as two CoolTouch treatments.”*
